

SOAP2REST Bridge - Product Requirements Document (PRD)

AI-Powered XML/SOAP to JSON/REST Modernization Platform

Problem Statement

Many enterprises still depend on legacy SOAP/XML services that are difficult to integrate with modern applications. SOAP2REST Bridge automatically converts SOAP services into REST APIs using AI-assisted mappings.

Target Users

Enterprise Integration Engineers, Backend Developers, Solution Architects, API Teams

Core Features (MVP)

- WSDL Upload & Parser
- AI Mapping Engine
- Dynamic REST Route Generation
- Runtime Proxy Engine (JSON ↔ XML)
- JWT Authentication
- API Key Management
- API Testing Console
- Analytics Dashboard
- Mock SOAP Service

User Stories

As an Integration Engineer, I want to upload a WSDL file so that I can generate REST endpoints automatically.

As a Backend Developer, I want JSON APIs instead of SOAP so that I can integrate faster.

As an Administrator, I want API key management so that I can secure generated APIs.

Success Metrics

WSDL Parse Success Rate >95%

REST Route Generation Success >95%

Conversion Accuracy >98%

Average Proxy Latency <500ms

Availability 99.9%

MVP Completion Criteria

- ✓ WSDL Upload Works
- ✓ SOAP Operations Parsed
- ✓ AI Generates Field Mappings
- ✓ REST Routes Created
- ✓ JSON ↔ SOAP Conversion Works
- ✓ JWT Authentication Enabled
- ✓ API Keys Managed
- ✓ Analytics Dashboard Available
- ✓ Swagger Documentation Generated
